TOLOSA

PRODUCT PROPOSAL

TOLOSA HRMS

Human Resources Management System

A role-based mobile platform that unites employee records, attendance, leave, payroll, performance, communication and administration in one secure app.

VERSION
1.0.10 (build 13)

PLATFORMS
Android · iOS · Web

About this proposal

This document presents TOLOSA HRMS as it is built today (version 1.0.10, build 13). Where a capability depends on back-end deployment, such as database migrations, server functions or push-notification setup, it is identified in Section 11 so that scope and expectations are clear from the start. Section 10 lists workflow decisions we recommend agreeing before go-live.

SECTION 01

Executive Summary

01

TOLOSA HRMS brings the everyday work of Human Resources, from people records and attendance to leave, payroll and company communication, into one role-aware mobile application.

Every employee, team leader, department head, finance officer and executive sees the tools relevant to their role. Requests follow configured approval workflows, payroll moves through a controlled release chain, and important events reach users through in-app notifications and, where configured, push alerts.

Run the workforce

- Employee directory and profiles
- Schedules, attendance and live team view
- Leave and HR requests with approvals

Pay with confidence

- Payroll from attendance, schedule and leave data
- HR, Finance and Top Management release chain
- Payslips available to employees

Keep everyone connected

- Company announcement feed
- Direct messages and group chat
- Notifications that deep-link to the work

How TOLOSA HRMS responds to common HR challenges

Challenge	How TOLOSA HRMS responds
Paper or chat-based leave and requests	Digital requests with multi-step approvals, live status, history and notifications to the people involved.
Manual attendance and schedule tracking	Time In / Time Out workflow checked against assigned shifts, with under-time confirmation, adjustment requests and a scoped live team view.
Spreadsheet-based payroll	Attendance, schedule and leave inputs feed cut-off payroll, which is released through staged approvals and published as payslips.
Scattered communication	One announcement feed with reactions and comments, direct messages, company group chat and push notifications.
Unclear access to sensitive data	Eight account roles applied in the app and backed by database policies, so visibility follows responsibility.

SECTION 02

Solution at a Glance

02

A single Flutter application connected to a managed backend, designed to be secure by default and practical to operate.

8	16	3	6
Account roles	Feature modules	Platforms	Theme accents

Architecture overview

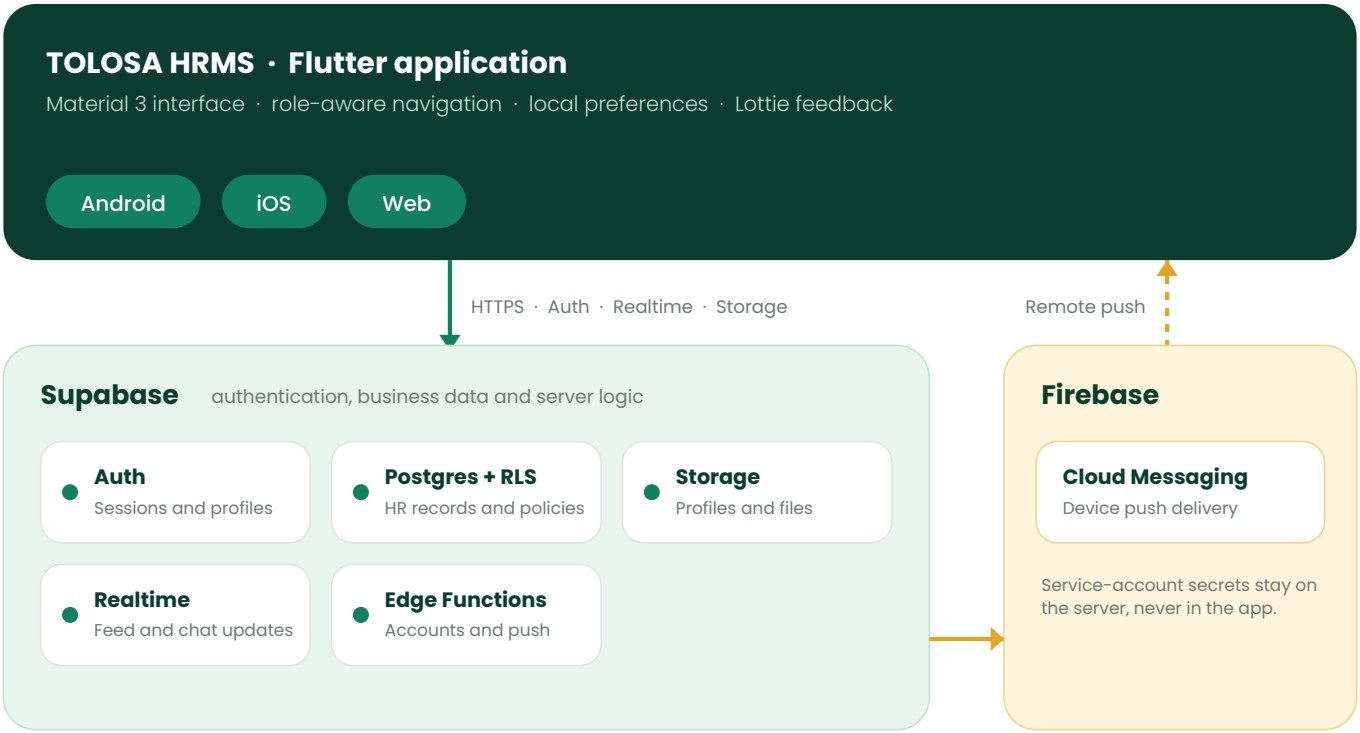

Figure 1. The mobile client talks to Supabase for authentication, data, files and live updates; push alerts are dispatched from a server function through Firebase Cloud Messaging.

Design principles

- **Role-first.** Navigation, screens and database policies all respect the signed-in role.
- **Server-validated.** Attendance clock events and account provisioning run on the server, never with privileged keys inside the app.
- **Resilient.** The dashboard loads with a time limit, so users see available data even when some requests are slow.
- **Configurable.** Departments, positions, leave types, teams and schedules are set up by administrators rather than hard-coded.

SECTION 03

User Journey & Navigation

03

From launch to sign-out, the app routes each person to the right place based on account state and role.

End-to-end application flow

1. **Launch**
   App starts and connects to the backend when it is configured. Local reminders initialize separately.
2. **Splash**
   Branded intro while sign-in and biometric state are checked.
3. **Authenticate**
   Email and password, or biometrics once enabled. Inactive accounts are rejected.
4. **Dashboard**
   Role-based shortcuts, attendance summary, announcements and counts.
5. **Feature work**
   Open a module, then view, submit, review or approve based on permissions.
6. **Sign out**
   Session ends and this device stops receiving push alerts.

Where people navigate

Element	Purpose
Bottom navigation	Four persistent tabs: Dashboard, Leave, Attendance and Profile.
Dashboard drawer	Additional feature navigation. The layout differs for employee and non-employee audiences.
Feature launcher	Opens each module and passes the current user and role context.
Notifications	Selected items deep-link straight to the related request, approval or payroll review.
Settings	Personal preferences, profile and password actions, support, and role-limited administration.

First sign-in
Accounts created with a temporary password are required to change it before entering the dashboard. Biometric sign-in can be offered after the first successful password sign-in, where the device supports it.

SECTION 04

Roles & Access Model

04

Eight account roles shape what each person sees and does. The signed-in profile is the authority; database policies add a second layer of protection.

Role	Typical responsibilities in the app
Employee	Personal dashboard, attendance, leave, HR requests, schedules, payslips, itinerary reports, documents and messages.
Team Leader	Participates in leave approvals and the itinerary workflow; records attendance.
Department Head	Participates in leave approvals and the itinerary workflow; records attendance.
HR Admin	Manages employee records, schedules and teams; prepares payroll; approves requests; administrative settings.
Finance	Reviews prepared payroll and advances it to Top Management.
Management	Administrative settings access; announcement management.
Top Management	Releases payroll. Not offered attendance recording or the Performance feature.
Super Admin	System account management, employee deletion and administrative settings. Not offered attendance recording or Performance.

Feature access by role

Feature	Employee	Team Leader	Dept Head	HR Admin	Finance	Mgmt	Top Mgmt	Super Admin
Manage employee records	–	–	–	■	–	–	–	■
System accounts	–	–	–	–	–	–	–	■
Payroll workflow	–	–	–	Prepare	Advance	–	Release	–
Attendance recording	■	■	■	■	■	■	–	–
Leave approvals	–	■	■	■	–	–	–	–
Itinerary workflow	■	■	■	■	–	–	–	–
Announcement management	–	■	■	■	■	■	■	■
Performance feature	■	■	■	■	■	■	–	–
Administrative settings	–	–	–	■	–	■	–	■

Figure 2. Access follows the app's permission rules. Individual screens and database Row Level Security can apply further limits, so a visible shortcut does not by itself guarantee every action.

SECTION 05

Feature Modules

05

Sixteen modules across five areas, available from the dashboard, drawer, bottom navigation or an actionable notification.

People & organization

Employee Directory & Profiles
Browse employees and open profiles with role, department, position and contact details. HR manages records; edits are role-limited.

INCLUDED

Team Management
Configure teams and their members. Online, teams and members are saved to the backend, with a local fallback for development.

INCLUDED

Accounts & Access
Super Admin creates and manages system accounts through secured server functions, so no privileged key is ever held by the app.

INCLUDED

Recruitment
Track open positions by title, department and status: Open, Screening or Paused. Applicant tracking is planned for a later phase.

PARTIAL · JOB OPENINGS

Time, leave & pay

Attendance
Time In, Time Out and Done Today, with schedule-aware lateness, under-time confirmation, team view and adjustment requests.

INCLUDED

Schedules
Weekly assignments with shift times, rest days and location, plus schedule-change and day-off requests.

INCLUDED

Leave
Submit, track and approve leave through a multi-step workflow, including a dedicated flow for HR self-leave.

INCLUDED

Payroll & Payslips
Cut-off payroll built from attendance, schedule and leave data, released through staged HR, Finance and Top Management approval.

INCLUDED

Requests, reports & performance

HR Requests
General requests with visible status and approval progress, routed to approvers by request type and role.

INCLUDED

Documents
View employee documents, upload through a dedicated form and assign required-document items.

INCLUDED

Reports & Itinerary
Periodic and daily reports submitted for review, with history, policy settings and missed-submission detection.

INCLUDED

Performance
Performance dashboard and review records for permitted roles.

INCLUDED

Home & communication

Dashboard
Role-based shortcuts with attendance summary, recent announcements, and notification and message counts at a glance.

INCLUDED

Announcements
Company feed with attachments, reactions, comments and replies. Authorized roles publish, edit and delete.

INCLUDED

Notifications
In-app centre with read state and deep links to related work. Optional push alerts for the device.

INCLUDED

Messages & Group Chat
Direct and company-wide chat with attachments, unread counts, staff mentions and @Everyone.

INCLUDED

SECTION 06

Core Workflows

06

How the main processes run from the first tap to the final record.

Attendance

1 **Time In**
Clock-in recorded by the server and compared with the assigned shift.

2 **Time Out**
Duration calculated. Early or under-time exits ask for confirmation.

3 **Done Today**
The day is complete and the action is locked.

4 **Adjustment**
Request a date or time correction when something was missed.

5 **Review**
Authorized reviewers act. Rest-day work needs HR approval.

- Lateness and duration use the schedule start and end times when available.
- Optional local reminders alert the employee two minutes before shift start and end, skipping rest days and already-recorded events.
- Authorized users see a scoped live attendance view for their team.

Leave

1 EMPLOYEE
Submit
Employee chooses leave type and dates and sends the request.

2 REVIEWERS
Approval stages
Configured steps such as Team Leader, Department Head and HR Admin.

3 **Decision**
Approved or rejected, with status updated and the requester notified.

4 **History**
Completed requests stay on record; active ones are never hidden.

- The exact approval stages and their order come from the installed workflow configuration.
- HR staff use a dedicated self-leave workflow.

Schedule changes & general HR requests

1 EMPLOYEE
Request
Employee asks for a schedule adjustment, day-off change or other HR request.

2 APPROVERS
Review
Routed to approvers by request type and role, with progress visible.

3 **Outcome**
Approved schedule changes appear in the weekly schedule; requesters are notified.

Payroll release

1 HR ADMIN
Prepare
Select the cut-off, load attendance, schedule, leave and pay inputs, adjust and save.

2 FINANCE
Review
Finance verifies the prepared payroll and advances it.

3 TOP MGMT
Release
Top Management gives final approval and releases the payroll.

4 EMPLOYEES
Payslips
Employees and authorized users view applicable payslip details.

How pay is calculated

Pay basis	Rule applied
Daily-paid	Pays verified duty and approved paid leave. A half-day counts as half of the daily rate, and unworked days earn no basic pay.
Fixed monthly	Starts from half of the monthly basic salary and applies attendance deductions using the computed daily rate.
Rest-day work	Excluded from automatic duty pay. HR approves each completed rest-day attendance record; each approved calendar day adds one daily-rate Rest Day Pay.

Payroll records are treated as compliance history and are not removable through personal Trash.

Itinerary & reports

1 EMPLOYEE
Submit
Employee submits a periodic or daily report with any supporting files.

2 REVIEWER
Review
Reviewer processes the report or returns it for correction.

3
Track
History, policy settings and notifications keep both sides informed.

- A scheduled database job detects missed submissions once it is configured (see Section 11).

SECTION 07

Settings & Administration

07

Personal preferences for everyone and configuration tools for permitted roles.

Personal preferences

Setting	What it does	Good to know
Dark mode	Switches between light and dark appearance.	Saved on the device.
Theme color	Chooses the accent used on controls and highlights.	Independent of dark mode.
Notifications	Turns remote push alerts on or off for the account.	Asks for operating-system permission and registers the device token.
Attendance reminders	Local alerts two minutes before shift start and end, for the next 14 days.	Works without push. Android may delay alerts slightly to save power.
Biometric login	Fingerprint or face sign-in after a password sign-in.	Requires authentication to enable and is cleared at logout.
Change password	Updates the signed-in account password.	Requires the backend connection.
Help Center	Opens a direct chat with HR.	Recipient is resolved by the backend.

Theme accents

Green Blue Red Violet Yellow Orange

Administrative tools

Tool	Purpose
Company Setup	Departments, positions and leave types.
Team Management	Teams and membership, shown to HR Admin and Super Admin.
Audit Logs	History of recorded activity for review.
Trash	Restore or permanently remove supported items.
Log out	Confirms, then returns to sign-in.

SECTION 08

Data Governance & Trash

08

Trash is designed as a tidy-up and history tool for personal views, not as a universal eraser.

Supported items

Announcements, notifications, sent direct messages, company chat messages, and completed personal history such as attendance, leave, requests, schedule requests, adjustments and itinerary.

Protected items

Active workflow items, payroll records and employee documents cannot be treated as personal Trash because they are operational or compliance records.

Restore or remove

Items can be restored. Permanent deletion needs explicit confirmation and removes the underlying completed record and any linked files.

Recommended retention rule

A decision for the client

Today, permanent deletion of completed personal history also removes the official record behind it. Section 10 recommends agreeing a retention rule so that employees can tidy their own view while HR and payroll keep a protected record.

SECTION 09

Platform, Security & Technology

09

Platform availability

Capability	Android	iOS	Web
Core HR workflows	Yes	Yes	Yes
Biometric sign-in	Yes	Yes	Not available
Remote push notifications	Yes	Yes	Not available
Local attendance reminders	Yes	Yes	Not available

Push notifications require Firebase configuration (and Apple push setup for iOS) together with the Supabase push schema and server function.

Security by design

- No service-role key or Firebase service-account secret is stored in the app; build values are supplied at build time rather than committed.
- Row Level Security, server functions and migrations form part of the functional contract, not an optional extra.
- Attendance writes use a server-validated clock workflow; account provisioning, approval and password reset run through secured Edge Functions.
- Inactive accounts are rejected when a session is restored; temporary passwords must be changed before use.
- Biometric preference stays on the device and is cleared at logout; the device push token is deactivated on sign-out where possible.

Technology stack

Layer	Technology
Application	Flutter with Material 3, Plus Jakarta Sans typography, Lottie loading and feedback animations
Backend	Supabase: Auth, Postgres with Row Level Security, Storage, Realtime and Edge Functions
Push delivery	Firebase Cloud Messaging, dispatched from a Supabase server function
Local storage	Device preferences for theme, reminders, biometrics and development fallbacks

SECTION 10

Workflow Review

10

Items we recommend agreeing before go-live. Each is a policy or configuration decision rather than a defect, and each one makes the system safer to operate.

#	Area	What we found	Recommendation	Priority
01	**Attendance integrity**	Employees can permanently delete completed attendance records, which HR and payroll rely on as the official source.	Lock records once a payroll cut-off is processed. Limit permanent deletion to unprocessed periods or to HR, and log each deletion.	HIGH
02	**Payroll scope**	Overtime, night differential, holiday premiums, statutory contributions and withholding tax are not described in the current workflow. Rest-day work is paid at one daily rate.	Confirm the pay policy and labor rules (rest-day work commonly carries a premium) with payroll or legal advisers before go-live.	HIGH
03	**Approval matrix**	Approval stages come from the installed database workflow. Order and fallbacks are not stated, for example who approves a Department Head's own request or what happens when an approver is absent.	Agree a written approval matrix per request type and role, with delegation and escalation rules.	HIGH
04	**Sample-data fallbacks**	Audit Logs and some settings lists can show sample or built-in records when the backend is empty or unreachable.	Disable fallbacks in release builds and show clear empty or error states.	HIGH
05	**Leave for senior roles**	Leave is available to every signed-in user, but leave-approval access is explicit only for HR Admin, Department Head and Team Leader.	Define the approver for Management, Top Management and Super Admin leave, and confirm the HR self-leave route.	MEDIUM
06	**Trash and official records**	Leave and schedule history is described as removable without deleting official approval records, yet permanent deletion also removes the underlying completed record and linked files.	Choose one retention rule. Suggested: personal Trash hides the employee's view only, and official records follow a fixed retention period.	MEDIUM
07	**"Verified duty"**	Daily-paid payroll pays verified duty, but only rest-day work has an explicit HR approval step.	Define what verified means, such as complete Time In and Out, or HR review of every day.	MEDIUM
08	**Cut-off calendar**	Fixed-monthly pay starts from half the monthly salary, implying two cut-offs per month. The calendar is not documented.	Document the cut-off schedule and confirm no other pay frequency is required.	MEDIUM
09	**Role coverage**	Super Admin and Top Management cannot record attendance or use Performance. Management has no payroll or leave-approval role.	Confirm these exclusions match the client's organization chart.	MEDIUM
10	**Recruitment**	The applicant list is development-only sample data and no applicant-tracking workflow exists yet.	Present it as Job Openings at launch and schedule applicant tracking for Phase 2.	MEDIUM
11	**Team membership saves**	Membership updates use several separate database operations, so a failure could leave partial changes.	Move the update into a single transactional database function.	LOW
12	**Roles list**	Settings shows a Roles list, but the eight roles are fixed in the application.	Label it as reference only, or define whether custom roles are required.	LOW

SECTION 11

Delivery Readiness & Roadmap

11

The application code is complete for the modules above. Going live also depends on configuring the production environment.

Pre-launch checklist

	Item	What is needed
■	**Database setup**	Apply the documented Supabase migration sequence, including the Trash and permanent-delete scripts, to the production project.
■	**Security policies**	Review Row Level Security policies, database functions and Storage buckets against every role.
■	**Server functions**	Deploy the account provisioning, approval, password-reset and push-dispatch Edge Functions with their secrets.
■	**Push notifications**	Complete Firebase and Apple push configuration and the device-token tables.
■	**Scheduled jobs**	Configure the scheduled job that detects missed itinerary submissions.
■	**Production data**	Create real accounts and organization data. All sample accounts and HR records have been removed.
■	**Store identifier**	Replace the legacy Android package identifier once the company approves its unique identifier. It cannot change after store publication.
■	**Release build**	Supply the Supabase URL and publishable key at build time, and disable local debug fallbacks.
■	**Acceptance testing**	Test every role end to end: attendance, leave, approvals, payroll release and payslips.

Suggested roadmap

Enhancement	Description	Timing
Applicant tracking	Candidate pipeline, screening stages and hiring decisions linked to job openings.	PHASE 2
Verified audit trail	Live audit events replacing sample fallbacks, with filters and export.	BEFORE LAUNCH
Payroll extensions	Statutory contributions, premiums and overtime according to the client's confirmed policy.	PHASE 2
Approval delegation	Delegates, escalation and reminders for approvers who are absent.	PHASE 2
Retention controls	Fixed retention periods and HR-protected records behind personal Trash.	BEFORE LAUNCH

SECTION 12

Engagement & Next Steps

12

A phased path from approved scope to a supported production launch.

Delivery phases

1 **Environment**
Provision Supabase and Firebase, apply migrations, deploy server functions and secrets.

2 **Configuration**
Set up departments, positions, leave types, schedules, teams and accounts.

3 **Acceptance**
Role-by-role testing against the agreed approval matrix and pay policy.

4 **Launch**
Training, store identifiers, release build and go-live.

5 **Support**
Monitoring, fixes and planned Phase 2 enhancements.

Decisions we need from you

- **Approval matrix** for leave, schedule and general requests, including senior roles and absent approvers.
- **Payroll policy** covering cut-off calendar, premiums, statutory deductions and the meaning of verified duty.
- **Retention rule** for attendance, leave and request history.
- **Company identifier** for the Android package and store listings.
- **Pilot group** of users from each role for acceptance testing.

Commercial terms
Investment, timeline and support terms are agreed separately and form part of the final engagement.

Acceptance

By signing below, the parties confirm they have reviewed the scope described in this proposal and agree to proceed to the delivery phases above.
